

Sustainable Infrastructure

Problems

- Congestion
- Oil Prices (tripled in the last 6 years)
- War (2 in the last 16 years)
- Terrorism (funded by oil profits, 9/11, 3/11, ...)
- Global Warming
- Peak Oil

Solution

- Energy Independence
- Vigilance
- Act in advance of events
- Drive Parasitic Mass (mass we pay to move that is not cargo or passengers) toward zero.

JPods is a way to approach moving only the person, gurney/care-giver, pallet, etc....

Without Parasitic Mass, solar collectors provide more energy than is required to transport. Energy independence.

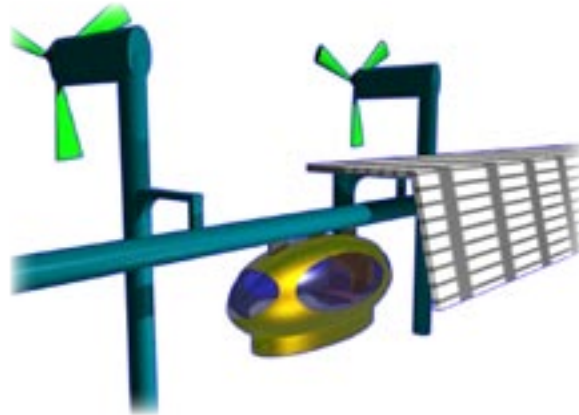

Leverage the success of Huntsville Hospital's Tram: moves people securely on-demand, pays for itself every 5 years, independent of gas prices (Green oval).

Phase 1 is in Orange (lease for 3 months)

Phase 2 is permanent Orange and Light Blue

Phase 3 is to network the entire city so access is within a quarter mile of everywhere.

Privately financed and owned in cooperation with Huntsville's economic community.
